Shaurya Pratap Singh

Lucknow, Uttar Pradesh
+91 7307408355 | shauryapratapsingh.work@gmail.com | zmy-shaurya | Zmy-Shaurya

Education

GLA University — Mathura, Uttar Pradesh
Bachelor of Technology in CSE (Specialization in AI & ML) ***CGPA - 7.79*** — *Aug 2024 – July 2028*

Coursework / Skills

- Data Structures & Algorithm
- Operating Systems
- Machine Learning
- Artificial Intelligence
- Database Management System
- OOP Concepts
- FullStack Development
- Internet of Things

Technical Skills

Languages: C, Python, Java, JavaScript, SQL (MySQL), HTML, CSS, Lua
Frameworks/Libraries: Flask, Django, React.js, Pandas, Numpy, Matplotlib, PyautoGUI
Developer Tools & Hosting: Git, GitHub, Docker, GitHub Pages, Vercel, Render, Streamlit, Power BI

Certifications

Microsoft AZ-900 Azure Fundamentals
Microsoft AI-900 AI Fundamentals
Accenture Software Engineering Job Simulation
Deloitte AU Data Analytics Job Simulation
HackerRank MySQL (3-stars), Python (Basic)

Projects

LandChain Blockchain Solution to Land Registry | *HardHat, Solidity, MetaMask, Pinata*

- Implemented Solidity **smart contracts** for **decentralized property registration**, authority verification, and secure on-chain ownership transfers.
- Built a Next.js 16 + MetaMask (ethers.js v5) frontend for document upload, verification, My Properties, transfers, and public property lookup.
- Developed a Node.js/Express backend with Tesseract.js OCR and **IPFS** (Pinata) APIs for structured land-record extraction and storage.

Crime Cast | *Python, NLP, Supabase, Folium, Google Maps*

- Built a Python-based crime analytics pipeline that processes **FIR datasets** and **real-time news data** to detect and visualize crime hotspots.
- Implemented **NLP** using **spaCy** to extract crime entities and locations, followed by **geocoding** with **Google Maps API** to map incidents to precise coordinates.
- Integrated **NewsAPI** and Supabase to collect, store, and manage real-time crime data streams.
- Designed a data pipeline using Pandas and REST APIs to structure unorganized crime reports for further geospatial analysis and hotspot detection.

Technoxian AgriBot Rover | *Python, Raspberry Pi, IoT*

- Contributed to the software part for our project for Technoxian Robotics World Cup 9.0 (Themed Bot Challenge).
- Wrote Python scripts to control rover functionalities and robotic arm movements.
- Worked with various types of servos, Raspberry Pi OS and various IoT components.

Achievements

- Won **1st** place @CodePunk 2.0 – 24 hr Inter College Hackathon.
- Participated **@Technoxian Robotics World Cup 9.0** – Themed Bot Challenge (software team, rover control).
- Scored among the **top 10 teams @Hack & Wiz 2.0** – Inter College Hackathon hosted @GLA University.
